

**Advancing one of
North America's largest
undeveloped gold-copper
deposits towards production**

A Generational Scale Asset
in a Tier-1 Jurisdiction

AUGUST 2025

TSX: **TLG**
OTCQX: **CHXMF**
FSE: **CM5R**

CAUTIONARY LANGUAGE, QP STATEMENTS AND LEGAL DISCLAIMERS

*The mineral reserve estimate disclosed herein has an effective date of January 15, 2024, and is based on the mineral resource estimate dated October 2, 2023, for Troilus Gold by AGP Mining Consultants Inc. The Mineral Reserve estimate was completed under the supervision of Willie Hamilton, P.Eng. of AGP, who is a Qualified Person as defined under NI 43-101. Mineral Reserves are stated within the final pit designs based on a US\$1,550/oz gold price, US\$20.00/oz silver price and US\$3.50/lb copper price. An NSR cut-off of C\$9.96/t was used to define reserves. The life-of-mine mining cost averaged C\$3.99/t mined, preliminary processing costs were C\$8.02/t ore and G&A was C\$1.94/t ore placed. The metallurgical recoveries were varied according to gold head grade and concentrate grades. 87 pit recoveries for equivalent grades were 95.5%, 94.7% and 98.2% for gold, copper, and silver respectively. J pit recoveries for equivalent grades were 93.1%, 89.3% and 88.9% for gold, copper, and silver respectively. X22 pit recoveries for equivalent grades were 95.5%, 94.7% and 98.2% for gold, copper, and silver respectively. SW pit recoveries for equivalent grades were 85.7%, 91.5% and 85.6% for gold, copper, and silver respectively. The formulas used to calculate equivalent values are as follows, for 87 Pit AuEq = Au + 1.5361*Cu +0.0133 *Ag, for J Pit AuEq = Au + 1.4849*Cu +0.0123 *Ag, for SW Pit AuEq = Au + 1.6535*Cu +0.0129 *Ag, for X22 Pit AuEq = Au + 1.5361*Cu +0.0133 *Ag. Please refer to the identified risks in the Company's Annual Information Form available under the Company's profile at www.sedarplus.ca for known legal, political, environmental, and other risks that could materially affect the potential development of the mineral resources and mineral reserves.*

The completed NI 43-101 technical report associated with the Troilus Project FS will be available on SEDAR+ at www.sedarplus.ca under the Company's issuer profile, as well as the Company's website at www.troilusgold.com within 45 calendar days.

This presentation reflects the technical information presented in the May 14, 2024, press release. Nicolas Guest, P.Geo., Exploration Manager at Troilus Gold, and Kyle Frank, P.Geo., VP Exploration at Troilus Gold, both of whom are Qualified Persons as defined by NI 43-101, have reviewed and approved the written disclosure in this presentation.

Feasibility Study Consultants: The Troilus Project Feasibility Study was prepared and compiled by AGP Mining Consultants Inc. ("AGP") and supported by independent consulting firms, Lycopodium Limited ("Lycopodium") and WSP Canada Inc. ("WSP"), in collaboration with Troilus' technical team. **Qualified Persons for the Feasibility Study press release announced on May 14, 2024:** The FS is prepared by independent representatives of AGP, Lycopodium and WSP, each of whom are Qualified Person as defined by NI 43-101 Standards of Disclosure for Mineral. Each of the QPs are independent of Troilus Gold Corp. and have reviewed and confirmed that this news release fairly and accurately reflects, in the form and context in which it appears, the information contained in the respective sections of the Troilus FS for which they are responsible. The affiliation and areas of responsibility for each QP involved in preparing the Troilus FS are provided below. AGP QPs: Paul Daigle, P.Geo. - Mineral Resources estimate; Willie Hamilton, P.Eng. - Mineral Reserves, Mine design and scheduling; Gordon Zurowski, P.Eng - Mine Costing and financial analysis; Lycopodium QPs: Ryda Peung, P.Eng. - Metallurgical review, process design and operating cost estimate; Balvinder Singh, P. Eng. - Capital cost estimates; Zuned Shaikh, P. Eng. - Design and material take off for the process plant related infrastructure. WSP QPs: Vlad Rojanschi, P.Eng. - Design and material takeoff for the surface water management infrastructure, hydrogeology, and mine site water balance prediction; Laurent Gareau, P.Eng. - Geotechnical design and material takeoff for the Tailings Storage Facility; Pierre Primeau, P.Eng. - Design and costs for TSF water treatment for suspended solids removal, and selected surface water conveyance pipelines and pumping; Marc Rougier, P.Eng. - Mine geotechnical aspects of open pits slopes design.

Cautionary Note regarding forward looking information

This presentation contains "forward-looking statements" within the meaning of applicable Canadian securities legislation. Forward-looking statements include, but are not limited to, statements regarding the results of the FS, including, without limitation various project economics, financial and operational parameters such as the timing and amount of future production from the Project, expectations with respect to the IRR, NPV, payback and costs of the Project, anticipated mining and processing methods of the Project; proposed infrastructures, anticipated mine life of the Project, expected recoveries and grades, timing of future studies including the environmental assessments (including the timing of an environmental impact study) and development plans, opportunity to expand the scale of the project, the project becoming a cornerstone mining project in Noth America; the development potential and timetable of the project; the estimation of mineral resources and reserves; realization of mineral resource and reserve estimates; the timing and amount of estimated future exploration; costs of future activities; capital and operating expenditures; success of exploration activities; the anticipated ability of investors to continue benefiting from the Company's low discovery costs, technical expertise and support from local communities, the timing and amount of estimated future exploration; and the anticipated results of the Company's 2024 drill program and their possible impact on the potential size of the mineral resource estimate. Generally, forward-looking statements can be identified by the use of forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "continue", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "will", "might" or "will be taken", "occur" or "be achieved". Forward-looking statements are made based upon certain assumptions

and other important facts that, if untrue, could cause the actual results, performances or achievements of Troilus to be materially different from future results, performances or achievements expressed or implied by such statements. Such statements and information are based on numerous assumptions regarding present and future business strategies and the environment in which Troilus will operate in the future. Certain important factors that could cause actual results, performances or achievements to differ materially from those in the forward-looking statements include, amongst others, currency fluctuations, the global economic climate, dilution, share price volatility and competition. Forward-looking statements are subject to known and unknown risks, uncertainties and other important factors that may cause the actual results, level of activity, performance or achievements of Troilus to be materially different from those expressed or implied by such forward-looking statements, including but not limited to: there being no assurance that the exploration program or programs of the Company will result in expanded mineral resources; risks and uncertainties inherent to mineral resource and reserve estimates; the high degree of uncertainties inherent to feasibility studies and other mining and economic studies which are based to a significant extent on various assumptions; variations in gold prices and other metals, exchange rate fluctuations; variations in cost of supplies and labour; receipt of necessary approvals; availability of financing for project development; uncertainties and risks with respect to developing mining projects; general business, economic, competitive, political and social uncertainties; future gold and other metal prices; accidents, labour disputes and shortages; environmental and other risks of the mining industry, including without limitation, risks and uncertainties discussed in the Company's latest Annual Information Form, its technical reports and other continuous disclosure documents of the Company available under the Company's profile at www.sedarplus.ca. Although Troilus has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Troilus does not undertake to update any forward-looking statements, except in accordance with applicable securities laws.

Non-IFRS Financial Measures

The Company has included certain non-IFRS financial measures or ratios in this presentation, such as Initial Capital Cost, All-In Sustaining Cost, Sustaining Capital and Capital Intensity, which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. As a result, these measures may not be comparable to similar measures reported by other corporations. Each of these measures used are intended to provide additional information to the user and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS.

Non-IFRS financial measures used in this news release and common to the gold mining industry are defined below. As construction and operation of the Project are at the study stage, the Company does not have historical non-IFRS financial measures nor historical comparable measures under IFRS, and therefore the foregoing prospective non-FRS financial measures or ratios may not be reconciled to the nearest comparable measures under IFRS.

All-in Sustaining Costs ("AISC") and AISC per Ounce

AISC is reflective of all of the expenditures that are required to produce an ounce of gold from operations. AISC reported in the FS includes total cash costs, sustaining capital, expansion capital and closure costs, but excludes corporate general and administrative costs and salvage. AISC per Ounce is calculated as AISC divided by payable gold ounces and copper/silver credits.

Cautionary Note to U.S. Investors Concerning Estimates of Mineral Resources

Mineral resource estimates have been prepared in accordance with the requirements of Canadian securities laws, which differ from the requirements of U.S. securities laws. The terms "mineral resource", "measured mineral resource", "indicated mineral resource" and "inferred mineral resource" are defined in NI 43-101 and recognized by Canadian securities laws but are not defined terms or recognized under U.S. securities laws. U.S. investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be upgraded to mineral reserves. "Inferred mineral resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an "inferred mineral resource" will ever be upgraded to a higher category. Under Canadian securities laws, estimates of "inferred mineral resources" may not form the basis of feasibility or pre-feasibility studies. U.S. investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable. Accordingly, these mineral resource estimates and related information may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the U.S. federal securities laws and the rules and regulations thereunder.

We are responsibly
advancing the past-
producing gold-copper
Troilus Project towards
production.

*One of the largest undeveloped
gold equivalent deposits in
North America*

*Largest permitting-stage
copper project in Quebec*

**3rd largest undeveloped copper deposit*

VALUE PROPOSITION: LOCATION, SCALE, NEAR-TERM PRODUCTION

Tier 1 Jurisdiction

Located in one of world's most prolific gold mining regions

Quality Brownfield Site

Past-producing mine (1996-2010); +US\$500 million worth of existing infrastructure.

Robust Feasibility Study

22-year mine life with peak production of 536,400 oz AuEq per year.

11.2 Moz AuEq Deposit

+1.80 Moz Inferred – Among the largest undeveloped Au-Cu deposits in N.A.

Proven Leadership

Proven ability to capitalize and attract financing. Construction-ready team in place.

ESG Leadership

ECOLOGO certified & UNGC member.

Source: Cormark Securities, S&P Capital and corporate disclosures

*Cut off grades are based on \$US 1,850/ oz Au; \$4.25/lb Cu, and \$23.00/ oz Ag; with an exchange rate of US\$1.00: CAD\$1.30. Recoveries varied with an average of 90% Gold, 92.5 % Silver and 91.8% copper without considering revenues from other metals. AuEq formulas are calculated as follows: Z87 Zone : AuEq = Au grade + 1.5628 * Cu grade + 0.0128 * Ag grade; J Zone : AuEq = Au grade + 1.5107 * Cu grade + 0.0119 * Ag grade; X22 Zone : AuEq = Au grade + 1.5628 * Cu grade + 0.0128 * Ag grade; SW Zone : AuEq = Au grade + 1.6823 * Cu grade + 0.0124 * Ag grade.

PERMITTING THE TROILUS PROJECT

2018

Troilus signs a Pre-Development Agreement with the Cree Nation of Mistissini & the Cree Nation Government.

2020

Initiation of environmental baseline studies and pre-consultation sessions in preparation for the ESIA

2022

Initiation of Federal and Provincial environmental permitting processes

2020-2024

Environmental baseline studies and community consultations (Cree Nation of Mistissini, Oujé-Bougoumou Cree Nation, the Cree Nation Government, Chibougamau and Chapais)

JUNE 2025

Troilus files ESIA to IAAC (*federal*) and MELCCFP (*provincial*)

H2 2026

Anticipated provincial and federal permitting decisions.

HIGHLIGHTS

- Extensive community consultations
- Past-producing mine with legacy & regional understanding of mining
- Studies confirm waste rock is non-acid-generating, reducing long-term environmental risks.

BASIC AND DETAILED ENGINEERING PROGRESS

Advancing Toward 2026 Construction Readiness

- Proven experience delivering world-class mines: **Detour Lake, Canadian Malartic**
- Strong site familiarity; previously led flotation optimization at Troilus
- 45+ years of experience in mining & energy, 20+ offices across Canada, U.S. & Chile

KEY MILESTONES ACHIEVED

Process Flowsheet Finalized

- Comprehensive review of May 2024 Feasibility Study
- Design optimizations identified to support scalability, energy efficiency & robust operations
- Final flowsheet locked in on schedule

12-Week Engineering Initiation Program Completed

- 45-person dedicated team from BBA working on Troilus
- EPCM contract awarded. Procurement strategy launched; multiple RFPs issued
- Owner's team & EPCM organizational structures finalized

CLOSING IN ON A DECADE OF RAPID DEVELOPMENT

KEY MILESTONES AS WE ADVANCE TO BUILD CANADA’S NEXT COPPER-GOLD MINE

DEWATERING OF THE FORMER PITS UNDERWAY

- Dewatering permits received in 2020
- Dewatering initiated in August 2024 (*J4 pit, followed by Z87*)
- Three 140Hp pumps currently operating; +6.3M m³ of water discharged to date
- Continuous water monitoring

ADVANCING LOW-CARBON ENERGY SOLUTIONS

Environmental stewardship is fundamental to how we operate

Existing Hydroelectric Power Infrastructure

- 50MW substation at site; upgraded and well-maintained
- 107km of 161 kV high tension powerlines maintained by Hydro-Quebec connect to site
- Renewable and low-cost hydroelectric power

Hybrid Renewable Energy System

- 500 solar panels (producing 222.5 kWp) and a 15 kWp wind turbine installed at site
- Reduces reliance on diesel fuel and provides backup power to support our ongoing activities.
- Provide supplemental and backup power for the Troilus site.
- Supports our goal of reducing GHG emissions and achieving carbon neutrality.

Member of:

*supporting the development
and promotion of renewable
energy across Québec.*

TROILUS

POSITIONED FOR GROWTH

Tier-1 Jurisdiction

Rated one of the top mining jurisdictions globally.

Generational Scale Asset

22-year mine life with excellent potential for growth.

Low-cost Production

1st quartile AISC among the major Canadian gold mines.

Upcoming Major De-Risking Milestones

Excellent progress with Project funding & permitting nearing final stages.

Proven Team with a Strong Track Record

Construction-ready team & external consultants in place.

MINING SEQUENCE

Southwest pit has 2 phases, mined between years 1 to 9.

Pre-production mining starts in Z87.

X22 has 2 phases, mined between years 18 to 21.

Z87 is comprised of 4 phases, with final phase completed in year 19.

J has 2 phases, mined between years 5 to 15.

Southwest

Z87

X22

J

Grade blocks:

- 0.96 \$/t (0.2g/t AuEq)
- 24 \$/t (0.5 g/t AuEq)
- 43 \$/t (0.9 g/t AuEq)

Mineral Reserve Estimate
Effective Date Jan 15, 2024
Cut-off grade: 9.96 \$/t (0.20g/t AuEq)

The northern pits (87, J & X22) have waste dump locations located to the north and south, while the SW pit primarily sends waste to nearby west and south waste dumps.

Low grade material will be stockpiled on a large pad which provides feed material later in the mining schedule or as required.

NOTES RELATED TO AuEq & CuEq CALCULATIONS

Open pit cut-off grade is C\$9.96/t NSR where the metal equivalents were calculated as follows:

- Z87 Zone : $\text{AuEq} = \text{Au grade} + 1.5361 * \text{Cu grade} + 0.0133 * \text{Ag grade}$
- J Zone : $\text{AuEq} = \text{Au grade} + 1.4849 * \text{Cu grade} + 0.0123 * \text{Ag grade}$
- X22 Zone : $\text{AuEq} = \text{Au grade} + 1.5361 * \text{Cu grade} + 0.0133 * \text{Ag grade}$
- SW Zone : $\text{AuEq} = \text{Au grade} + 1.6535 * \text{Cu grade} + 0.0129 * \text{Ag grade}$

Metal prices for the AuEq formulas are: \$US 1,550/ oz Au; \$3.50/lb Cu, and \$20.00/ oz Ag.

Metal recoveries for the AuEq formulas are:

- Z87 Zone: 95.5% for Au recovery, 94.7% for Cu recovery and 98.2% for Ag recovery
- J Zone: 93.1% for Au recovery, 89.3% for Cu recovery and 88.9% for Ag recovery
- X22 Zone: 95.5% for Au recovery, 94.7% for Cu recovery and 98.2% for Ag recovery
- SW Zone: 85.7% for Au recovery, 91.5% for Cu recovery and 85.6% for Ag recovery

Total	380	0.49	0.058	1.00	0.59	0.39	6.02	484	12.15	7.26	3.24

Note: This mineral reserve estimate has an effective date of January 15, 2024, and is based on the mineral resource estimate dated October 2, 2023, for Troilus Gold by AGP Mining Consultants Inc. The Mineral Reserve estimate was completed under the supervision of Willie Hamilton, P.Eng. of AGP, who is a QP as defined under NI 43-101. Mineral Reserves are stated within the final pit designs based on a US\$1,550/oz gold price, US\$20.00/oz silver price and US\$3.50/lb copper price. An NSR cut-off of C\$9.96/t was used to define reserves. The life-of-mine mining cost averaged C\$3.99/t mined, preliminary processing costs were C\$8.02/t ore and G&A was C\$1.94/t ore placed. The metallurgical recoveries were varied according to gold head grade and concentrate grades. 87 pit recoveries for equivalent grades were 95.5%, 94.7% and 98.2% for gold, copper, and silver respectively. J pit recoveries for equivalent grades were 93.1%, 89.3% and 88.9% for gold, copper, and silver respectively. X22 pit recoveries for equivalent grades were 95.5%, 94.7% and 98.2% for gold, copper, and silver respectively. SW pit recoveries for equivalent grades were 85.7%, 91.5% and 85.6% for gold, copper, and silver respectively. The formulas used to calculate equivalent values are as follows, for 87 Pit AuEq = Au + 1.5361*Cu + 0.0133 *Ag, for J Pit AuEq = Au + 1.4849*Cu + 0.0123 *Ag, for SW Pit AuEq = Au + 1.6535*Cu + 0.0129 *Ag, for X22 Pit AuEq = Au + 1.5361*Cu + 0.0133 *Ag. Please refer to the identified risks in the Company's Annual Information Form available under the Company's profile at www.sedarplus.ca for known legal, political, environmental, and other risks that could materially affect the potential development of the mineral resources and mineral reserves.
